

We enhance
Chemistry

Company Overview

Behind every production line that runs without interruption, there's a supply chain that someone got right.

At Cosmo Chemistry, that's exactly what we do. We source, structure and deliver industrial and specialty chemicals to manufacturers and distributors who can't afford gaps in quality or supply. Not tomorrow. Not once. Ever.

Headquartered in India with trade desks in UAE, Nigeria, and Argentina, we operate across 55+ countries moving 600+ TEUs every quarter for a network of 200+ active buyers. Our portfolio covers eleven industrial sectors, from water treatment and pharmaceuticals to coatings, plastics, food processing, and beyond. But the products are only half the story.

The other half is how we operate. Every manufacturer in our supply chain is audited. Every shipment carries full documentation, certificates of analysis, safety data, and customs paperwork before it leaves port. Every delivery window is tracked, not estimated. We do not act as chemical traders. We build sourcing infrastructure that procurement teams can depend on, quarter after quarter.

In an industry where a delayed shipment can shut down a factory floor and a quality deviation can compromise an entire batch, we've made reliability our entire business model.

If your operations depend on chemicals arriving on spec, on time, and on budget, we should be talking.

Why Choose

Cosmo Chemistry

Procurement teams don't switch suppliers for marginal gains. They switch when the cost of staying put becomes higher than the cost of change. Here's why some of the most demanding buyers in global manufacturing have made that switch and stayed.

- **Sourcing That Doesn't Gamble**

Every supplier in our network is vetted before a single kilogram ships. We audit manufacturing facilities, verify certifications, and test product consistency, because your production schedule shouldn't depend on a supplier we haven't verified ourselves.

- **Quality You Can Measure, Not Just Trust**

We don't ask you to take our word for it. Every shipment is backed by certificates of analysis, batch documentation, and compliance records. The spec sheet says what it says. The product matches. That's the standard, not the exception.

- **Export Operations Built for Speed**

Customs delays, documentation gaps, and port-side confusion are problems that belong to someone else's supply chain. Our export team handles documentation, regulatory compliance, and logistics coordination so that your cargo moves, not stalls.

- **A Portfolio That Covers the Floor**

From commodity acids and alkalis to specialty surfactants and pharma intermediates we cover eleven industrial verticals. That means fewer supplier relationships to manage, consolidated shipments, and a single sourcing partner who understands cross-industry chemistry.

- **We Work the Way You Work**

Your procurement process has timelines, approval gates, and specifications that don't bend. Neither do we. Our team aligns with your buying cycle, maps to your quality requirements, and delivers sourcing solutions built around how your operation actually runs, not how we wish it did.

Vision

To be the sourcing partner that global manufacturers trust by default not because we're the biggest, but because we're the most dependable. We're building a chemical supply network where reliability isn't aspirational. It's operational.

Mission

To source and deliver high-quality industrial chemicals through a supply chain built on three things: manufacturers we've verified, logistics we control, and partnerships we intend to keep for decades. Every shipment is a promise kept.

What Drives Us

Five principles. Non-negotiable.

Commitment to Quality

We don't ship hope. Every product in our catalogue is sourced from audited manufacturers, tested against documented specifications, and released only when it meets the grade. If it doesn't pass, it doesn't ship.

Optimized Supply Chain

Our logistics infrastructure is engineered for predictability, not speed at the expense of control. Structured sourcing routes, pre-cleared documentation, and port-level coordination mean your material arrives when your production schedule says it should.

Strong Industry Partnerships

We've spent a decade building relationships with manufacturers who share our standards. These aren't vendor listings on a spreadsheet; they're production partners we visit, audit, and hold accountable. Their consistency is our reputation.

Market-Focused Solutions

We study the industries we serve. Our team understands the difference between a coating-grade titanium dioxide and a food-grade one and why that distinction matters to your formulation. Chemistry knowledge isn't optional in this business. It's the baseline.

On-Time Global Deliveries

A chemical that arrives late is a chemical that wasn't there when it mattered. Our export operations are built to eliminate the variables that cause delays, incomplete paperwork, unconfirmed bookings, last-mile confusion. We track every container from origin to destination.

Water Treatment

Clean water doesn't happen by accident. It happens because someone chose the right coagulant, dosed the right disinfectant, and trusted the chemistry to perform under pressure every single day.

Cosmo Chemistry supplies the chemical backbone of water treatment operations worldwide. From municipal drinking water plants and industrial cooling systems to membrane filtration units and swimming pool maintenance, our products support the full treatment cycle: coagulation, flocculation, pH adjustment, disinfection, and scale control.

We source for operators who measure performance in parts per million and track compliance in real time. If your treatment process demands chemicals that meet specification every time they're dosed, that's the supply standard we're built for.

Products

- Ferric Chloride Solution / Anhydrous
- Aluminium Sulfate
- Polyaluminium Chloride (PAC)
- Sodium Thiosulfate 97-98%
- Ferrous Sulfate
- Caustic Soda Flakes / Pearls
- Soda Ash Light / Dense
- Hydrochloric Acid (HCl)
- Hydrogen Peroxide
- Sulphuric Acid
- Calcium Carbonate
- Sodium Metabisulphite
- EDTA (Ethylenediaminetetraacetic Acid)
- SHMP (Sodium Hexametaphosphate)
- Ammonia Liquid
- Benzalkonium Chloride (BKC)
- Calcium Hypochlorite
- Sodium Hypochlorite
- TCCA 90%
- Aluminium Chlorohydrate (ACH)
- Polyacrylamide (PAM)
- Sodium Dichloroisocyanurate (SDIC)
- Sodium Dimethyldithiocarbamate (SDDC)
- Activated Carbon
- Zeolites
- Borax Pentahydrate
- Water Decolourant
- Flocculant
- Coagulant
- Copper Sulfate

Mining & Oil Drilling

When your operation runs around the clock, thousands of metres underground or offshore, the chemicals you depend on need to perform without question. Cosmo Chemistry supplies specialty chemicals for mining and oil drilling from mineral extraction and flotation to drilling fluid management and process water treatment. Our products are sourced to handle extreme conditions, maintain process stability, and support recovery targets that production teams are measured against. We don't just supply chemicals to the mining and energy sector. We supply the reliability that keeps operations moving.

Products

- Hydrogen Peroxide 50%-60%
- Hydrochloric Acid (HCl)
- Sulphuric Acid
- Ferric Chloride Liquid / Anhydrous
- Nitric Acid
- Copper Sulfate Pentahydrate
- Activated Carbon
- Sodium Nitrate
- Potassium Amyl Xanthate (PAX)
- Xanthan Gum
- Guar Gum
- Ammonia Solution
- Caustic Soda Flakes / Pearls
- Sodium Cyanide
- Sodium Hypochlorite
- Polyaluminium Chloride (PAC)
- Barite
- Polyanionic Cellulose – Low Viscosity (PAC-LV)
- Aluminium Sulfate (Alum)
- Soda Ash Dense / Light
- Calcium Bromide
- Calcium Chloride
- Partially Hydrolyzed Polyacrylamide (PHPA)
- Starch
- Lime
- Magnesium Oxide
- Calcium Carbonate
- Lead Nitrate

Personal Care & Home Care

The ingredients inside a shampoo bottle or a surface cleaner may never make the label but they determine everything the consumer experiences. Lather, viscosity, fragrance hold, antimicrobial action, skin feel. Every performance claim traces back to a chemical decision.

Cosmo Chemistry supplies a broad portfolio of surfactants, emulsifiers, preservatives, conditioning agents, rheology modifiers, and functional actives used in personal care and home care formulations. From mass-market shampoos and hand washes to premium skincare and industrial-strength cleaning agents, our ingredients support the full formulation spectrum.

Our sourcing network is built for formulators who need ingredient consistency across production runs because a batch that performs differently from the last one is a batch that shouldn't have shipped.

Products

- Pine Oil
- Cocamidopropyl Betaine (CAPB)
- Cetyl Trimethyl Ammonium Chloride (CTAC)
- Chlorphenesin
- Propyl Paraben & Their Salts
- Methyl Paraben & Their Salts
- Triclosan
- Allantoin
- Stearic Acid
- Benzalkonium Chloride
- Nonyl Phenol Ethoxylate
- Lauryl Alcohol Ethoxylate
- Glycerol Mono Oleate
- Glycerol Mono Stearate
- PEG Series
- Cetareth Series
- Optical Brightener
- Octyl Salicylate
- Petroleum Jelly
- Polyquaternium
- Povidone Iodine
- Phenoxyethanol
- Piroctone Olamine
- Glycerine
- DMDM Hydantoin
- Zeolite
- Sodium Lauryl Sulfate (SLS)
- Linear Alkylbenzene Sulfonic Acid (LABSA)
- Sodium Laureth Sulfate (SLES)
- Zinc Pyrithione
- Benzophenone 3 / 4
- Polysorbate 20 / 60 / 80

Products

- Cetostearyl Alcohol
- White Mineral Oil
- Menthol Crystals
- Fatty Acids
- Fatty Alcohols
- Carbomer
- Shea Butter
- Xanthan Gum
- Talc
- Essential Oils
- Ammonium Lauryl Sulfate
- Sodium Alpha Olefin Sulphonate
- Fabric Softener
- Acid Thickener
- Niacinamide (Vitamin B3)
- Emulsifying Wax
- Pearlizing Agent
- Sorbitan Esters
- Ethylene Glycol and Its Blends
- Selenium Sulfide
- Isopropyl Palmitate (IPP) & Isopropyl Myristate (IPM)
- Cocamide DEA (CDEA)
- Lauryl Alcohol / Lauryl Polyoxyethylene Alcohol (LAO / LAPAO)
- Chloromethylisothiazolinone / Methylisothiazolinone (CMIT / MIT)
- Para Chloro Meta Xylenol (PCMX)
- Dichlorometa Xylenol (DCMX)
- Iodine / Potassium Iodide
- Colour Speckles
- Enzymes
- Polymers

Pharma

In pharmaceutical manufacturing, there is no room for “close enough.” A deviation in purity, a shift in particle size, a lapse in documentation any one of these can pull an entire batch off the line. The chemicals that go into pharma formulations need to be right. Every time.

Cosmo Chemistry supplies active pharmaceutical ingredients, excipients, and specialty intermediates to drug manufacturers and healthcare product formulators. Our products are sourced with strict attention to purity, traceability, and regulatory alignment because the industries we serve operate under standards that don't allow shortcuts.

From oral solid dosage forms and topical preparations to veterinary pharmaceuticals and antiseptic formulations, we deliver the chemical inputs that keep production moving and compliance intact.

Products

- Menthol Crystal
- Talc
- Chlorhexidine Gluconate 20%
- Cetrimide BP
- Sulfathiazole
- Cetrimonium Bromide
- Piroctone Olamine
- Ciprofloxacin Hydrochloride BP
- Fenbendazole
- Albendazole
- Sulfasalazine
- Magnesium Hydroxide
- Aluminium Hydroxide
- Magnesium Stearate
- Aluminum Stearate
- Sodium Stearate
- Ketoconazole
- Diphenyl Acetonitrile (DPAN)
- 3-Dimethylamino-2-Methyl Propyl Chloride Hydrochloride (DMMPH 65%)
- Cyclopropane Methanol (CPMO)
- 2-(Dimethylamino) Isopropyl Chloride Hydrochloride (DMIPC)
- 2-Furoic Acid
- Methyl 4-Chlorobutyrate (M4CB)
- Methyl Cyclopropane Carboxylate (MCP)
- Cyclopropane Carboxylic Acid (CPCA)
- Pregabalin
- Minoxidil
- Diethylhexyl Triazone
- Promethazine HCl
- Microcrystalline Cellulose

Basic Industrial Chemicals

Every industrial process begins with a basic chemical. The acid that etches. The alkali that neutralises. The solvent that dissolves. These are the raw materials that sit upstream of everything else – and when they're unavailable or off-spec, entire production chains come to a stop.

Cosmo Chemistry supplies a comprehensive range of industrial acids, alkalis, chlorides, oxidisers, and chemical intermediates used across manufacturing sectors worldwide. Our sourcing network ensures that high-volume, high-frequency chemical requirements are met with the consistency and reliability that large-scale operations demand.

These aren't niche products. They're the foundation of industrial chemistry – and we treat their supply with the seriousness that foundation materials deserve.

Products

- Hydrochloric Acid
- Sulphuric Acid
- Nitric Acid
- Glacial Acetic Acid
- Phosphoric Acid
- Formic Acid
- Stearic Acid
- Sulfamic Acid
- Monochloro Acetic Acid
- Sodium Monochloro Acetate (SMCA)
- Caustic Soda
- Soda Ash
- Sodium Bicarbonate
- Calcium Chloride
- Magnesium Chloride
- Sodium Chloride
- Methylene Chloride
- Benzyl Chloride
- Hydrogen Peroxide
- Sodium Metabisulphite
- Liquid Ammonia
- Formaldehyde
- Lead Acetate
- Barium Carbonate
- EDTA
- Calcium Hypochlorite
- Sodium Hypochlorite
- Sodium Xylene Sulphonate (SXS)
- Sodium Cumene Sulphonate (SCS)
- N,N-Diethyl-meta-toluamide (DEET)
- Toluene Diisocyanate (TDI)
- Polyol
- Sodium Carboxymethyl Cellulose (SCMC)
- Lead Nitrate
- Activated Carbon
- Borax Pentahydrate/Decahydrate
- Caustic Potash (KOH)
- Sodium Sulfate Anhydrous

Food Ingredients

Food manufacturing operates at the intersection of chemistry and trust. The preservative that extends shelf life, the acidulant that balances flavour, the stabilizer that holds a texture together each one has to perform to specification and meet safety standards that are non-negotiable.

Cosmo Chemistry supplies ingredients used in food processing, preservation, and formulation. Our products support manufacturers producing beverages, baked goods, confectionery, dairy products, and processed food applications where consistency in ingredient quality directly affects the finished product.

We source to the standards that food-grade chemistry demands. Because in this industry, the margin between a product that sells and a product that gets recalled is measured in milligrams.

Products

- Sorbitol
- Starch
- Liquid Glucose
- Sodium Metabisulphite
- Calcium Chloride
- Soya Lecithin
- Acetic Acid
- Citric Acid
- Xanthan Gum
- Sodium Benzoate
- Sodium Bicarbonate
- Phosphoric Acid
- Hydrogen Peroxide 35%
- Titanium Dioxide
- Dextrose Monohydrate
- Guar Gum
- Maize Starch
- Glycerine
- Ammonium Bicarbonate
- Sodium Gluconate
- Butylated Hydroxytoluene (BHT)
- Butylated Hydroxyanisole (BHA)
- TBHQ
- Maltodextrin
- Potassium Sorbate
- Benzoic Acid
- Food Color
- KCl Food Grade
- Carboxymethyl Cellulose (CMC)
- Ascorbic Acid

Flavour & Fragrances

Scent is the most immediate sense. A fragrance can define a brand, trigger a memory, or determine whether a product gets picked up or put back on the shelf. The chemistry behind that moment is precise, deliberate, and unforgiving.

Cosmo Chemistry supplies aromatic compounds – both natural extracts and synthetic ingredients – used in perfumery, cosmetics, food flavouring, household products, and oral care formulations. Our portfolio covers musks, floral notes, woody bases, fresh top notes, and functional aroma chemicals engineered for stability, longevity, and blending versatility.

We source for fragrance houses and FMCG formulators who need batch-to-batch consistency in their aroma profiles – because a perfume that smells different from one production run to the next is a perfume that loses its customer.

Products

- Galaxolide 50 DEP
- Di-Propylene Glycol
- Hedione
- Essential Oils
- Amber Fleur (Iso E Super)
- Benzaldehyde
- Benzyl Benzoate
- Benzyl Acetate
- Cis-3-Hexenol
- Citronellol
- Diethyl Phthalate
- Cresol Methyl Ether
- Isoamyl Acetate
- Isoamyl Alcohol
- Isoamyl Salicylate
- Menthol Crystals
- Nutmeg Oil
- Phenyl Ethyl Acetate
- Pine Oil
- Terpineol
- Delta-3-Carene
- Alpha-Pinene
- Beta-Pinene
- Dipentene
- Ketone 101
- Rosin
- Turpentine Oil
- Rose Oxide
- Verdyl Acetate
- Phenethyl Isobutyrate (PEIB)
- Anisic
- Aldehyde
- Camphor
- Cinnamic Aldehyde
- Cinnamic Alcohol
- Thymol Crystals
- Benzyl Salicylate
- Peppermint Oil
- Citral
- D-Limonene

Feed & Fertilizers

Crop yields don't improve on optimism. They improve on the right micronutrient, applied at the right concentration, at the right stage of growth. The same principle applies to livestock nutrition where feed-grade minerals directly influence animal health, growth rates, and production efficiency.

Cosmo Chemistry supplies the mineral compounds and chemical inputs that agricultural and animal feed producers depend on. Our products support soil health, crop nutrition, and livestock performance from smallholder farming operations to large-scale commercial agriculture.

We source for an industry that operates on seasons and cycles, where a missed delivery doesn't just cost money it costs an entire growing period. Reliability in agricultural chemical supply isn't a convenience. It's a necessity.

Products

- Zinc Sulfate
- Magnesium Sulfate
- Manganese Sulfate
- Zinc Oxide
- Sodium Bicarbonate
- Copper Sulfate Pentahydrate
- Ferrous Sulfate
- Ammonium Chloride
- Ammonium Sulfate

Paint, Inks & Coatings

A coating is only as good as the raw materials behind it. The wrong pigment disperses poorly. The wrong solvent flashes too fast. The wrong filler kills the finish. Formulators know this. So do we.

Cosmo Chemistry supplies the chemical raw materials that go into paint, ink, and coating formulations across architectural, industrial, automotive, and wood-finishing applications. Our portfolio covers solvents, extenders, fillers, pigments, and specialty additives, each sourced to meet the processing and performance demands of modern coating systems.

Whether you're formulating for colour retention, UV resistance, adhesion, or regulatory compliance, we supply the building blocks that make those targets achievable at production scale.

Products

- Ethyl Acetate
- Benzyl Alcohol
- Dehydrated Castor Oil
- Calcium Carbonate
- Methylene Chloride
- Iron Oxides
- Diacetone Alcohol
- Kaolin
- Talc
- Silica
- Mica
- Titanium Dioxide
- MEK (Methyl Ethyl Ketone)
- Pigments
- Dyes
- Styrene Acrylic
- PVA (Polyvinyl Alcohol)
- Pure Acrylic
- VAM (Vinyl Acetate Monomer)
- Paint Dryers
- Butyl Acetate
- Isopropyl Alcohol (IPA)
- Methanol
- MEKO (Methyl Ethyl Ketoxime)
- Pine Oil
- Ethylene Glycol
- Isophorone
- Silicone-based Defoamers
- Barium Sulfate

Industrial and Cosmetics Dyes

Colour is the first thing a buyer notices and the last thing a manufacturer wants to get wrong. A dye that bleeds, fades, or shifts between batches doesn't just affect aesthetics – it affects brand trust and market acceptance.

Cosmo Chemistry supplies industrial dyes for coatings, textile processing, and specialised colouring applications. Our products are sourced for strong colour intensity, batch-to-batch consistency, and processing stability – the three things that matter most when colour is a critical specification.

Whether you're formulating for lightfastness, washfastness, or compatibility with specific resin systems – we supply dyes that perform to the standard your market requires.

Products

- Acid Violet 43
- Acid Orange 7
- Basic Violet 14
- Disperse Blue 3
- Basic Yellow 28
- Basic Blue 7
- P-Phenylenediamine (PPD)
- 2-Nitro-P-Phenylenediamine (2-NPPD)
- 4-Nitro-O-Phenylenediamine (4-NOPD)
- P-Aminophenol (POP)

Our Supply Network

A sourcing company is only as good as the manufacturers behind it. We know this – which is why we've spent over a decade building relationships with producers who share our commitment to quality, consistency, and reliability.

Our supply network isn't a database of contacts. It's a curated group of manufacturing partners whose facilities we've visited, whose processes we've reviewed, and whose output we've tested against the standards our global buyers expect. These partnerships allow us to offer sourcing stability that transactional trading simply cannot match.

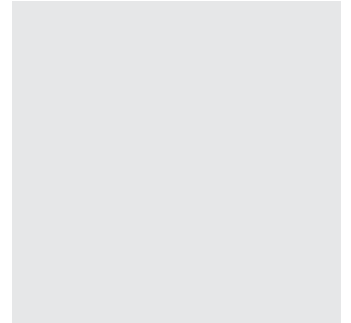

These partnerships are the foundation of our promise: when we commit to a specification and a delivery date, we have the manufacturing capacity behind us to honour it.
